FROM THE MANAGER

Rodney Kappes
Manager, BDM Rural Water System, Inc.

Greetings from the Team at BDM:

This fall has sure been a blessing with extended favorable good weather. We have been able to continue installing new water hookups, complete additional maintenance projects, and move forward with constructing the new water treatment plant. We had hoped to have the new water treatment plant building up and enclosed before winter sets in so contractors could work through the winter months. As I write this report, the building is up, and cement is being poured for the floors. We should be in good shape to have contractors continue working when snow flies and temperatures drop. We still may be subject to some delay as an electrical panel may not be built until September 2025. We will still be ahead of schedule, but this delay may move back our early start-up date.

Water sales continue to lag marginally from last year due to our service area's wet weather this spring. BDM's total revenue is up 1.1% through September, while expenses are up 3.5%. We continue to see margin compression in the operation area due to higher input costs and increased contractor costs. We have been notified by most of our electricity suppliers that there will be rate increase in 2025. Electricity is one of our biggest expenses when running BDM. The board monitors and reviews operation margins monthly, with rate determinations to be made at the end of or early next year.

Shannon recently sent letters asking for your response to the type of pipe material coming 18" into your house. EPA required these letters as follow-ups for hookups who had not responded to the earlier requests. BDM will be required to have responses from an additional 10% of those who did not respond to the original request every year. Every year (for 10 years), we will have to resend the letters to those hookups who have not responded. To help save staff from spending time on this verification requirement and the time to keep sending letters every year, please give us a call or fill out the requested information. For those of you who responded, it is very much appreciated. This process is being mandated for all water service providers. If you text 1-605-237-8120 (this number is only used for this purpose) with your BDM account number and a picture showing the 18" of pipe material coming into the house, we can complete the rest. In addition, you can call the office at 605-448-5417 and verbally tell us the material the pipe is made from, and we can document that for your hookup. If you have any questions, please call the office.

Thank You for your continued support, and have a blessed Holiday Season with family and friends.

God Bless!

BOARD OF DIRECTORS

President

Torre Raap – Andover, SD

Vice President

Kevin Deutsch – Sisseton, SD

Secretary-Treasurer

Hal Treeby – Hecla, SD

Directors

Terry Leonhardt – Groton, SD

Marc O'Brien – Britton, SD

Don Ogren – Langford, SD

Alex Suther – Eden, SD

Advisory Director

John Cloud – Sisseton, SD

 **STATEMENT OF NON-DISCRIMINATION:** In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

(1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410; (2) fax: (202) 690-7442; or (3) email: program.intake@usda.gov. This institution is an equal opportunity provider.

BDM MEMBERSHIP CORNER

BILLING PACKETS

Billing packets will be mailed in December to all customers not signed up for Auto-Pay.

If you haven't received yours by the end of December, please call Shannon at 605-448-5417.

THE BDM OFFICE WILL BE CLOSED FOR THE FOLLOWING HOLIDAYS:

WEDNESDAY, DECEMBER 25TH
- CHRISTMAS DAY

WEDNESDAY, JANUARY 1ST,
- NEW YEAR'S DAY

As always, if you have an emergency, please call the office at 605-448-5417 or toll free at 1-800-448-9236. You will then receive a message with the telephone number of the employee on call. Please call that person for assistance in an emergency only.

BE A LEAK SEEKER!

With over 2,300 miles of pipeline, occasional leaks are going happen in the BDM system. Not only are leaks an inconvenience for our members, they are a costly expense to your water system. If you see a possible BDM leak, please call the office to report it right away. The first caller to report a verified leak will receive a \$30.00 credit on their next water bill.

BDM RURAL WATER SYSTEM, INC. RATE SCHEDULE (EFFECTIVE 7/1/2023)

GENERAL USER RATES:

Debt Service monthly payment: \$46.00 per hookup per month

\$6.95 per thousand gallons for the first 2,000 gallons used per month

\$5.95 per thousand gallons for the next 5,000 gallons used per month

\$4.95 per thousand gallons for the next 8,000 gallons used per month

\$3.95 per thousand gallons for over 15,000 gallons used per month

Gallons Used Per Month	Monthly Total	Gallons Used Per Month	Monthly Total
1,000	\$ 52.95	25,000	\$ 168.75
2,000	\$ 59.90	30,000	\$ 188.50
3,000	\$ 65.85	35,000	\$ 208.25
4,000	\$ 71.80	40,000	\$ 228.00
5,000	\$ 77.75	45,000	\$ 247.75
6,000	\$ 83.70	50,000	\$ 267.50
7,000	\$ 89.65	55,000	\$ 287.25
8,000	\$ 94.60	60,000	\$ 307.00
9,000	\$ 99.55	65,000	\$ 326.75
10,000	\$ 104.50	70,000	\$ 346.50
11,000	\$ 109.45	75,000	\$ 366.25
12,000	\$ 114.40	80,000	\$ 386.00
13,000	\$ 119.35	85,000	\$ 405.75
14,000	\$ 124.30	90,000	\$ 425.50
15,000	\$ 129.25	95,000	\$ 445.25
16,000	\$ 133.20	100,000	\$ 465.00
17,000	\$ 137.15	125,000	\$ 563.75
18,000	\$ 141.10	150,000	\$ 662.50
19,000	\$ 145.05	175,000	\$ 761.25
20,000	\$ 149.00	200,000	\$ 860.00

ALL USERS:

No water is included in the debt service payment. All water used is in addition to the monthly debt service payment. Payments are due by the 15th of the month. A \$10.00 fee applies to all payments received after that date. Service is subject to disconnection if payment is not received by the 22nd.

AFTER HOURS & WEEKENDS WATER EMERGENCIES:

Please call the BDM Office at 605-448-5417 or 1-800-448-9236 & a message will direct you to the employee on call.

THE MPEMBA EFFECT:

Why Hot Water Freezes Faster Than Cold Water

Have you ever thought about how water freezes? It seems like cold water would freeze faster than hot water because it's closer to the freezing point. But there's a surprising phenomenon called the Mpemba Effect (pronounced em-PEM-bah) where, under certain conditions, hot water actually freezes faster than cold water!

How Was It Discovered?

This effect was named after a Tanzanian student named Erasto Mpemba, who discovered it in the 1960s. During a cooking class, Erasto noticed that hot ice cream mixture froze faster than a cold one. He asked his teacher why, but no one had an answer. Erasto was curious and continued to experiment, and eventually, scientists took notice and named the effect after him!

Why Does the Mpemba Effect Happen?

Scientists are still trying to fully understand why the Mpemba Effect happens. But here are some ideas:

1. Evaporation: Hot water turns into steam and

evaporates faster than cold water. When some of the hot water evaporates, there's less water left, which might make it freeze faster.

2. Convection Currents: Hot water moves around more than cold water, which could help it cool down faster.

3. Molecular Changes: When water heats up, the bonds between its molecules stretch and change. This might make the hot water cool down differently and freeze faster.

4. Supercooling: Sometimes, cold water stays liquid even below freezing, which could make it take longer to freeze than hot water.

Fun Fact:

The Mpemba Effect doesn't always happen – it depends on things like the container shape, the type of water, and even the surrounding temperature. But it's a fun and surprising twist in science that shows how there's always more to learn, even about everyday things like water!

The pictures below illustrate a fascinating phenomenon that happens when boiling water is thrown into the air in extremely cold temperatures (-7°F in this case). Due to the cold, the hot water rapidly cools down as it disperses. Many of the droplets instantly turn into steam, creating a dramatic cloud-like effect.

Experiment Time!

NOTE: These experiments should only be conducted under the supervision of a responsible adult. Always follow safety guidelines and use appropriate protective equipment as needed. Failure to do so could result in injury or damage. Proceed with caution and ensure a safe environment.

EXPERIMENT #1

You need one very cold day, with an air temperature below zero degrees Fahrenheit (the colder the better). Fill a coffee mug with hot, near boiling water. Walk outside and toss the water into the air. If your water turns to snow, you have just witnessed the Mpemba Effect. That is amazing, right? Okay, now try the same experiment with a cold mug of water. What happened? ...probably not much of anything.

EXPERIMENT #2

You can do this experiment in your own freezer! Use two ice trays. Put hot water in one and cold water in the other. Check at 15 minute intervals. Which ice tray froze the fastest? If your answer is the tray with the hot water, you are right! Cold water molecules move slower in the freezer. Mainly, the outer water molecules in the tray come into contact with the cold freezer air. Hot water molecules move faster, causing more surfaces of the water molecules to be exposed to the cold freezer air – freezing them faster.

APPRENTICESHIPS VITAL TO THE WATER INDUSTRY

By Sue Bergheim, Apprenticeship Coordinator
– South Dakota Association of Rural Water Systems

The South Dakota Association of Rural Water Systems (SDARWS) is launching an Apprenticeship Program to train the next generation of skilled water and wastewater professionals. This program is designed to provide hands-on experience and technical training, creating a valuable career path in a critical industry.

If you know a young person exploring career options or someone considering a change in fields, this could be the perfect opportunity. By asking the five W's and one H – Who, What, When, Where, Why, and How – you can explore how this program could benefit them and their community while addressing the growing need for qualified professionals in the water sector.

Who participates in a successful apprenticeship?

A successful apprenticeship includes an employer, a mentor, and, of course, an apprentice.

An employer is any person or organization employing an apprentice. It is the person, business, or company responsible for providing hours of work, supervision, wages, and/or benefits to an apprentice.

A mentor is a worker who has attained a level of skills, abilities, and competencies recognized within an industry as mastery of the skills and competencies required for the occupation. Mentors play an essential role in the Apprenticeship Program being developed by SDARWS, built on national guidelines provided by the National Rural Water Association (NRWA). Mentors help provide the on-the-job training required for the program.

An apprentice is any individual employed by an employer meeting the qualifications described in the Association's Standards of Apprenticeship.

All three entities involved in an apprenticeship benefit from the experience. Employers get skilled labor, mentors pass on expertise, and apprentices receive hands-on experience and wages.

What is an apprentice?

The dictionary definition of an apprentice is: one who is learning by practical experience under skilled workers in a trade, art, or calling.

Apprenticeships combine paid on-the-job training with

classroom instruction to prepare workers for highly skilled careers. Workers benefit from apprenticeships by receiving a skills-based education that prepares them for good-paying jobs. Apprenticeship programs help employers recruit, build, and retain a highly skilled workforce.

When does an apprenticeship typically take place?

SDARWS is developing an apprenticeship program that will last approximately two years and require participants to complete 4,000 hours of on-the-job training (OJT) and 288 hours of related technical instruction (RTI). Exactly when the program will start for each apprentice is still to be determined.

Interested apprenticeship participants must be at least 18 years old, have a high school diploma or GED, and have a valid driver's license.

Where does an apprenticeship occur?

An apprenticeship occurs on-site with an employer, where the apprentice works directly with a mentor for on-the-job training. The related technical

training required for the SDARWS Apprenticeship Program will include a combination of in-person, classroom, and online components.

Why are apprenticeships important to the water industry?

The rural water industry faces significant workforce challenges, including an aging workforce, skill gaps, and difficulty attracting and retaining talent. The water industry is estimated to lose 30-50 percent of its workforce to retirement in the next ten years. The Apprenticeship Program helps fill this gap by training the next generation of workers, ensuring a steady pipeline of skilled professionals ready to step into critical roles.

How do I find out more about becoming an apprentice?

SDARWS has a website dedicated to information on water and wastewater careers, including the Apprenticeship Program: sdarws.com/WaterWorks.

Potential apprentices or employers with questions or interest in discussing the Apprenticeship Program can contact me via e-mail at sbergheim@sdarws.com, office phone at 605-556-7219, or cell phone at 605-501-9208.

DANR Awards More Than \$105 Million in Additional ARPA Grants for Statewide Environmental Projects

The South Dakota Department of Agriculture and Natural Resources (DANR) is distributing \$105,010,958 in additional federal grants to support vital water infrastructure and conservation projects.

Funded by the American Rescue Plan Act, the grants include:

- \$105 million allocated to nearly 30 water districts and rural water systems to enhance drinking water services across the state.
- \$65 million designated for waste and stormwater improvements in almost 20 cities and sanitary districts.
- \$5 million invested in riparian buffer grants, a conservation initiative promoting vegetation along rivers, streams, and lakes to improve water quality.

These investments aim to strengthen South Dakota's water systems and protect its natural resources and are administered by DANR.

ARPA PUBLIC WORKS PROJECTS

AURORA-BRULE RURAL WATER received an additional \$846,775 ARPA grant to install a new parallel water main, a new water storage reservoir, multiple loops within the system, a booster station, and make distribution line improvements. Previous funding for this project was awarded in April 2022.

BDM RURAL WATER SYSTEM received an additional \$1,738,345 ARPA grant to construct a new water treatment plant, install a water reservoir, install pipe to expand the water system and loop lines for added redundancy, and replace water meters. Previous funding was awarded in April 2022.

BLACK HAWK WATER USER DISTRICT received an additional \$254,340 ARPA grant to install a new water main crossing I-90 near Exit 52. The existing crossing is undersized and not operating effectively. Previous funding was awarded in June 2022.

BROOKINGS received an additional \$8,000,000 ARPA grant to construct a new lime softening water treatment facility along 34th Avenue. The new treatment plant will require the installation of raw and finished water lines to feed into the distribution system and includes the construction of six new municipal wells and a new transmission main. Previous funding was awarded in April 2022.

BROOKINGS-DEUEL RURAL WATER SYSTEM received an additional \$1,357,708 ARPA grant to construct water main to interconnect the system's two primary water sources, the Joint Well Field, and the Clear Lake Water Treatment Plant. The project will also include installation of a new water main to the Lake Cochrane service area to improve low pressures around the lake during periods of peak water use. Previous funding was awarded in April 2022.

CLAY RURAL WATER SYSTEM received an additional \$2,488,710 ARPA grant to construct two ground storage reservoirs near the existing Greenfield reservoir and the Wakonda Water Treatment plant. A new booster station at the Greenfield reservoir and distribution line improvements to provide additional capacity and accommodate a Highway 46 construction project is also included. Previous funding was awarded in April 2022.

DAVISON RURAL WATER SYSTEM received an additional \$189,255 ARPA grant to install a water line to parallel and loop existing mains and make upgrades to its automatic meter reading technology. Previous funding was awarded in April 2022.

FALL RIVER WATER USER DISTRICT received an additional \$1,400,007.62 ARPA grant to install a submersible pump and finish piping at the existing Fairburn well, construct a pump station and well house, a control building/pump station, a ground storage reservoir at the well site, pipeline to connect the Fairburn well to the existing distribution system in two locations, and a ground storage reservoir along the new pipeline route. Previous funding was awarded in June 2022.

GRANT-ROBERTS RURAL WATER SYSTEM received an additional \$1,023,690 ARPA grant to add transmission capacity allowing the system's two reservoirs to fill during high water use periods. Additional pipeline looping and parallels will be completed to distribute water to existing and new customers and improve the reliability of the water system. The project also includes installation new pipeline and other appurtenances to allow the town of Corona to access the Grant-Roberts Rural Water System. Previous funding was awarded in April 2022.

HANSON RURAL WATER SYSTEM received an additional \$548,388 ARPA grant to install water lines to parallel and loop of existing mains and make upgrades to its automatic meter reading technology. Previous funding was awarded in April 2022.

JOINT WELL FIELD, INC. received an additional \$1,440,459 ARPA grant to construct a new gravity filtration water treatment plant including aeration, detention, filtration, transfer pumping, raw water supply wells, and generation equipment. Previous funding was awarded in April 2022.

KINGBROOK RURAL WATER SYSTEM received an additional \$4,972,298 ARPA grant to upgrade the Badger pump station, DeSmet water treatment plant, Chester water treatment plan, Oakwood pump station, and the Orland pump station. The project also involves construction of an elevated tank near Arlington and booster pump station near Bryant, and relocation and resizing of pipeline segments along Highway 25 north of DeSmet. Previous funding was awarded in April 2022.

LEAD-DEADWOOD SANITARY DISTRICT received an additional \$339,623 ARPA grant to abandon the Hanna raw water transmission pipeline and install new ductile iron or steel pipe. Both low- and high-pressure lines will be re-routed to bypass the Englewood power generation facility, and a portable backup power generator will be purchased for use at multiple locations. Previous funding was awarded in June 2022.

LEAD-DEADWOOD SANITARY DISTRICT also received an additional \$136,662 ARPA grant to make improvements to the wastewater treatment plant serving Lead, Deadwood, Central City, and other unincorporated areas. Improvements include replacement of five aeration blowers, installation of fine bubble diffusers and aeration piping, and installation of a blower control system. Previous funding was awarded in June 2022.

LEWIS & CLARK REGIONAL WATER SYSTEM received an additional \$5,000,000 ARPA grant to construct two solids

contact units, a sludge thickener, three lime sludge drying beds, and a three million gallon clear well and high service pump station to increase the treatment plant capacity. Previous funding was awarded in April 2022.

SOUTH LINCOLN RURAL WATER SYSTEM received an additional \$2,444,355 ARPA grant to make system wide improvements including installing an elevated water tank, a new pump station, and a new water treatment plant. This project addresses capacity issues in portions of the distribution system and increasing demands within the existing service area. Previous funding was awarded in April 2022.

SOUTHERN BLACK HILLS WATER SYSTEM received an additional \$542,432 ARPA grant to extend the existing water system main from the two wells at Paramount Point Subdivision approximately 5 miles northeast to the Spring Creek Acres Subdivision to provide redundancy. The project will also construct a new well, booster pump station, new elevated storage reservoir, chlorination and SCADA systems, and new pressure reducing valve stations. Previous funding was awarded in April 2022.

TM RURAL WATER DISTRICT received an additional \$1,272,908 ARPA grant to install four miles of parallel 12-inch water main to address low water pressure situations during high water demand periods. Previous funding was awarded in April 2022.

TRIPP COUNTY WATER USER DISTRICT received an additional \$2,034,121 ARPA grant to replace two storage tanks, to parallel and loop water lines to increase the water pressure within the system, and to develop a new well field to address water supply issues. Previous funding was awarded in April 2022.

WEB WATER DEVELOPMENT ASSOCIATION received an additional \$10,500,000 ARPA grant. The funding is part of a much larger project to increase water capacity for WEB and to provide a bulk water connection for Aberdeen and BDM Rural Water. The project is known as the Water Investment in Northern South Dakota or WINS project, undertaken by all three entities with WEB acting as the lead contracting entity at this time. Previous funding was awarded in June 2023.

WESTERN DAKOTA REGIONAL WATER SYSTEM received an additional \$2,165,000 ARPA grant for a feasibility study to explore the use of its Missouri River water to supply a large portion of western South Dakota with a bulk water transmission line conveying Missouri River water to various communities, tribes, and water systems. The current funding will be used to hire an engineering firm to complete facilities plan and preliminary design for the project. Previous funding was awarded in April 2022.

WEST RIVER/LYMAN-JONES RURAL WATER SYSTEM received an additional \$602,702 ARPA grant to install PVC water mains serving areas in Mellette, Haakon, and Lyman counties. A new ground storage tank and necessary electrical controls would also be installed in Pennington County. Previous funding was awarded in April 2022.

ARPA GRANT UPDATES

Several water systems in South Dakota are making progress on projects funded through the most recent allocation of \$105 million in ARPA (American Rescue Plan Act) grant monies. The funding supports critical water and wastewater infrastructure improvements, including upgrades to distribution systems and treatment facilities. Below is an update highlighting the advancements and current status of a few of these projects.

CLAY RURAL WATER SYSTEM

Clay Rural Water System was awarded \$7,443,810 in ARPA grant money. The funds from this grant were used to help with costs of our current project, the “Chapter Project.” This funding helped to install close to 85,000 linear feet of pipe in the north part of our system. These new main lines will help improve pressure, add additional capacity, and correct water loss issues with deteriorating water lines.

Clay Rural Water System is also in the process of adding two new water storage reservoirs, also in the north part of the system. These two tanks will be a great benefit because they will add additional capacity to serve current customers. One new tank will be built in the same location as the future water plant, which will also help to serve future customers.

Clay Rural Water System also is in the process of replacing our Spink booster. This booster was originally installed in early 1979. Upgrades being built into this new booster will help monitor water loss more effectively, along with increasing pressure zones in the Akron and Spink area.

MID-DAKOTA RURAL WATER SYSTEM

The Mid-Dakota Rural Water System has made significant progress on its improvement projects, with all phases bid and remaining within budget. Numerous enhancements have been combined into a comprehensive project. The Automatic Meter Reading upgrade is approximately 50% complete, while the construction of the Backwash Filters and associated building is ahead of schedule and is projected to be operational by late summer 2025.

The parallel distribution pipeline upgrade is divided into three separate contracts. Schedule 1, covering 70 miles of pipeline, is around halfway completed. Construction on Schedules 2 and 3, which include 50 miles of pipeline, one booster station replacement, and two booster station rehabilitations, is scheduled to begin in 2025.

The project is supported by \$13,867,250 from an ARPA grant, \$2,000,000 from a Consolidated grant, and \$29,467,750 from a State Revolving Fund loan. Additionally, a second ARPA grant of \$6,830,882 brings the total expansion project funds to \$52,165,882.

WINS PROJECT (Water Investment In Northern South Dakota)

The WINS project received just over \$49 million dollars of ARPA funding. All ARPA funded projects will be completed and ARPA funding will be 100% expended by the end of 2026.

During 2024, construction was ongoing for the 13.5-mile, 49.5" raw and treated water main project that connects WEB's Missouri River intake to the water treatment plant, and the water treatment plant to the distribution system near the intersection of Highways 83 and 12. Thus far, about 6 miles of water main have been installed.

Bids are scheduled to be opened in November for the next phases of the WINS project, which includes about 17 miles of 30" and 36" water main. These pipeline segments are anticipated to be complete by the end of 2026.

WEST RIVER/LYMAN-JONES RURAL WATER SYSTEM

The West River/Lyman-Jones (WR/LJ) Rural Water System has made significant infrastructure improvements with the support of ARPA funding. In 2022, the Board of Water and Natural Resources approved a \$1,200,000 ARPA grant for WR/LJ, followed by an additional \$602,702 grant in 2024, bringing the system's total ARPA funding to \$1,802,702. These funds were used to construct a 300,000-gallon reservoir, a 336,000-gallon reservoir, and 10.5 miles of PVC water pipelines, serving areas in Mellette, Haakon, and Lyman counties. A new ground storage tank and necessary electrical controls were also installed in Pennington County.

The projects were completed in 2024, with ARPA grant funding covering 45% of the total costs for the storage and pipeline improvements. This investment has enhanced the system's capacity to provide reliable water service to its service area.

RURAL WATER HALL OF FAME

The South Dakota Rural Water Hall of Fame, established in 2024 by the South Dakota Association of Rural Water Systems, honors the visionaries and pioneers who transformed the rural water industry in the state. Celebrating the humble beginnings of rural water systems – ideas born around kitchen tables and brought to life through determination – the Hall of Fame recognizes individuals instrumental in providing clean, reliable water to rural communities. Their contributions have helped develop and sustain water systems that now enhance the quality of life and support agriculture and local economies across South Dakota.

Located at the Association's headquarters in Madison, SD, the Hall of Fame serves as a historical record and a source of inspiration, highlighting the dedication of rural water leaders who overcame challenges like funding, infrastructure, and logistics in sparsely populated areas. The inaugural class of honorees was inducted on November 13th in Pierre, SD, marking a milestone in celebrating the enduring spirit of South Dakota's rural water movement. By honoring these pioneers, the Hall of Fame ensures their contributions – turning a vision of clean water into a statewide reality – are celebrated and remembered.

RAY KUHL

Born on August 8, 1933, in Sioux Falls, South Dakota, Ray Kuhl was a dedicated advocate for rural community development and improvement. A St. Thomas College baseball scholarship recipient, Ray completed his degree at South Dakota State University while serving as an ROTC officer, eventually joining the Air National Guard.

Ray began his life with his wife, Jacqueline, in Waco, Texas, where he trained as an Airborne Combat Navigator during the Cold War. Veterans Affairs recognized his commitment to service, reflecting his pride in his military contributions.

Ray's passion for community service led him to East River Electric Power Cooperative in Madison, South Dakota, and later to Sioux Valley Empire Electric. Over his 12 years at Sioux Valley, Ray became a prominent public relations director and helped establish the South Dakota Association of Rural Water Systems. He advised the association from its inception and served as the management coordinator

for the Big Sioux Community Water System.

In 1977, Ray was named Executive Manager and Training Director of the South Dakota Association of Rural Water Systems, pioneering a statewide training program for rural water management. His leadership connected countless farmers with clean, reliable water sources, enhancing livestock health and quality of life for rural families. Ray's efforts laid the foundation for rural water systems across South Dakota, collaborating with local leaders to drive community and economic development.

Ray's lifelong dedication to rural water systems profoundly impacted South Dakota's water landscape. Ray Kuhl passed away on December 9, 2023, leaving a legacy of community dedication and service.

LOREN PAULSEN

Born near Ward, South Dakota, on October 16, 1932, Loren Paulsen dedicated his life to agriculture, education, and public service. After graduating from South Dakota State University with a degree in agricultural education, Loren's studies were interrupted by the Korean War. He enlisted in the Navy, serving with distinction in Japan. Upon his return, Loren resumed his studies, married his wife, Lucille, and became a high school agriculture teacher, inspiring students in Elkton, Garretson, and Colman.

Loren's passion for leadership and public policy led him to play a pivotal role in rural water development. In 1971, he helped organize the Big Sioux Community Water System, serving as chairman of its first steering committee. He became president of the board in 1972 when the system was officially incorporated, guiding its early development.

Loren's commitment to rural water extended beyond his

local community. He was a founding figure in the South Dakota Association of Rural Water Systems, serving as its first president in 1974. His leadership and vision helped lay the foundation for the organization's success.

Recognized for his expertise, Loren was appointed by South Dakota Governor Richard Kneip to serve on a special advisory committee for rural water systems under the Old West Regional Commission. Working with governors from neighboring states, Loren contributed to the planning and advancing of rural water infrastructure across the region.

Loren Paulsen passed away on December 23, 2018, in Flandreau, leaving behind a legacy of service and dedication to his community and state.

BILL DEMPSEY

Affectionately known as Bill to friends and Bud to family, Bill Dempsey was pivotal in pioneering rural water development in South Dakota. Born near Athboy, SD, in 1932 Bill graduated from White High School in 1950. In 1951, he joined the Air Force, serving as a radio operator during the Korean War. After his honorable discharge, he returned to South Dakota and married his wife, Ellen, in 1954. Together, they settled on the family farm near White, where they raised cattle, hogs, and row crops for over 30 years.

Bill's journey in rural water began in 1972 when he convened with local leaders around his kitchen table to address water issues in their community. This grassroots effort led to the formation of the Brookings-Deuel Rural Water System, with Bill serving as its first chairman and establishing a solid foundation for its success. He was also present at the organizational meeting for the South Dakota Association of Rural Water Systems (SDARWS) in Madison, SD, in October

1972. He later served as President of SDARWS for three years, secretary for three years, and developed an insurance program for rural water systems.

In 1976, Bill attended the inaugural meeting of the National Rural Water Association (NRWA) in Oklahoma City. There, he was elected to its Board of Directors and represented South Dakota for 11 years. In recognition of his contributions, Bill was awarded the first Carrol Anderson Award in 1978. He also held leadership roles with the East Dakota Water Development District and the South Dakota Conservation Commission.

After retiring in 2002, Bill's legacy of service continues to benefit communities across the state. He passed away on March 29, 2018, leaving behind a remarkable impact on South Dakota's rural water landscape.

DALE KENNEDY

Raymond Dale Kennedy was born on April 8, 1925, in Beresford, SD, and graduated from Beresford High School in 1943. He worked at a California aircraft parts plant during WWII, served in the U.S. Army in Germany post-war, and briefly attended SDSU before returning to farming. As a young man, Dale was invited to try out for the Brooklyn Dodgers, but farm duties took priority.

Dale played a pioneering role in bringing rural water to Lincoln County and became a charter director when the system launched in 1976. In 1977, Dale joined the SDARWS Board, representing South Lincoln Rural Water System. Serving as secretary for the South Dakota Board of Water and Natural Resources, he helped allocate state funds and shape the state water plan across three gubernatorial administrations.

In 1987, Dale was nominated and elected as South Dakota's director on the National Rural Water Association Board at the NRWA Annual Meeting in Charleston, SC. Known for his initiative and vision, Dale chaired fifty board meetings, twelve annual meetings, and many executive sessions. His volunteer advocacy in Pierre during legislative sessions was instrumental in advancing rural water initiatives.

A friend and champion of rural water in South Dakota, Dale was known for his "political" touch – earning the playful nickname "Governor" among friends. Dale Kennedy passed away on October 30, 2010, leaving a legacy of dedicated service to South Dakota's rural water community.

JIM FEENEY

Jim Feeney, a native of Mount Vernon, South Dakota, and an alumnus of South Dakota State University with a degree in Political Science, began his public service career in 1978 with the Highway Safety Program located in the Department of Public Safety and later the Department of Commerce and Regulation. In 1989, he found his calling at the Department of Environment and Natural Resources (DENR) as a Policy Analyst in the Water and Waste Funding program. His dedication led to promotions, first to Administrator of the Water Resources Assistance Program in 1996, and later to Director of the Division of Financial and Technical Assistance in 2013.

One of Jim's most significant achievements was incorporating dedicated water funding into an annual Omnibus Water Funding Bill, which provided essential funding to water projects across the state. This process provided critical support for systems such as Fall River Water User District, Lewis & Clark Regional Water System,

Mid-Dakota Rural Water System, Mni Wiconi/West River Lyman-Jones Rural Water System, Perkins County Rural Water System, and Southern Black Hills Water System. His efforts enabled these projects to leverage federal support, ensuring successful completion.

Jim also implemented the Drinking Water State Revolving Fund (SRF) program, and administered the Clean Water SRF and state Consolidated program. These programs continue to impact South Dakota's water quality and water infrastructure. After retiring from DENR in 2018, he continued his service with the South Eastern Council of Governments (SECOG) retiring in 2023.

Jim's nearly five-decade legacy is one of leadership and dedication, bringing lasting improvements to water quality, public health, and quality of life across South Dakota.

RURAL WATER CROSSWORD & WORD SCRAMBLE CONTEST

WINTER ACTIVITIES

SCRAMBLE ANSWER

Across

6. Crafting pretty shapes by folding and cutting paper.
8. Popular winter drink with marshmallows on top. (2 words)
9. Winter fun on a board, sliding down a snow-covered hill.
12. Activity involving building a jolly figure with a carrot nose.
13. Exciting winter ride powered by a snow machine.

14. Seasonal activity of sliding down a snowy slope on a sled.

Down

1. Fast-paced sport on ice involving a stick and a puck. (2 words)
2. Building a home out of blocks of snow, often dome-shaped.
3. Style of skiing done across flat or gently rolling snowy terrain. (2 words)
4. Competition or casual event for

- throwing frozen projectiles. (2 words)
5. Sport that involves sweeping in front of a sliding stone on ice.
6. Creating a figure on the ground by lying in the snow and moving your arms and legs. (2 words)
7. Fun activity where you glide down a hill on an inner tube (2 words)
10. Event involving figure eights and spins on ice. (2 words)
11. Mountain activity of following trails in deep snow with special footwear.

RULES: Use the colored squares in the puzzle to solve the word scramble above. Call your Rural Water System (See page 2 for contact information) or **enter online at www.sdarws.com/crossword.html** with the correct phrase by January 15, 2025 to be entered into the \$100 drawing.

Only one entry allowed per address/household. You must be a member of a participating rural water system to be eligible for the prize.

Your information will only be used to notify the winner, and will not be shared or sold.

Congratulations to Rita Hilgedick from Mid-Dakota Rural Water who had the correct phrase of "hope shines bright under fair lights" for October 2024.

RURAL AMERICA RELIES ON RURAL DEVELOPMENT

USDA RURAL DEVELOPMENT WATER PROGRAMS DRIVE ECONOMIC OPPORTUNITY

ECONOMIC VITALITY FOR RURAL COMMUNITIES

Critical infrastructure, including adequate water service, is a basic requirement for a healthy economy, encourages employment opportunities and makes a community a desired place to live and work. The nearly 45,000 water systems in rural America are anchor institutions in their communities.

In many rural communities water infrastructure is past its useful life. Without adequate water and sanitation services, businesses move out of our rural communities, forcing the next generation to leave to find better opportunities. Those left behind are robbed of hope for a prosperous future.

Rural America's economy is driven by entrepreneurship, and made of a diverse range of operations through over 700,000 businesses. Rural areas produce most of the food we consume, provide lumber and other forest products used to build our homes and furniture, and supply the energy we consume daily.

Rural economies are deeply connected to their urban counterparts

USDA RD WEP not only provides essential services to the families that live in rural America, but also all business activities. These include small businesses, farming, manufacturing, emergency services, and more. In rural America, nearly 85% of all business establishments are small. These small businesses are critical to local economies, employing 54% of workers in their communities. Rural communities need access to funding through USDA RD WEP to thrive.

Today's Congressional policies and funding decisions are jeopardizing the economic vitality of every community in rural America. Budget cuts will leave USDA WEP unable to accomplish its mission. WEP is instrumental in helping rural America increase economic opportunities for all rural people.

PROMOTION BY THE NATIONAL RURAL WATER ASSOCIATION

USDA RURAL DEVELOPMENT WATER & ENVIRONMENTAL PROGRAMS (WEP)

In 2023, USDA RD WEP funded over \$1.7 billion in projects to small and rural communities.

The average median household income for communities that received WEP funding was \$37,029, half of the national average household income of \$74,580.

In 2023, 308 WEP projects addressed health and sanitary challenges and 28,326 new connections provided drinking water to residents for the first time, resulting in over 400,000 individuals and households benefiting from this funding.

KEEP RURAL AMERICA STRONG!

Scan the QR Code to learn more about how you can help keep Rural America Strong!

CHECK OUT OUR CONVENIENT BILLING OPTIONS!

E-BILLS ARE AVAILABLE!!

You can now get your monthly water bill statements emailed to you! If you are interested in this option, call Shannon or send an email to shannonw@bdmruralwater.com. Be sure to specify if you want emailed bills only, or both email and printed forms.

CUSTOMER WEB PORTAL

We have a Customer Web Portal (CWP) available for your convenience! You can check your current balance, look up and print past bill amounts and usages, and make payments by credit or debit cards. We accept Visa, MasterCard, and Discover. A 2.5% service fee will apply. You may choose to Quick Pay your balance without creating an account, or if you create an account you can sign up for automatic payment of your water bill each month.

Visit www.bdmruralwater.com and click on the "PAY MY BILL" button to be taken to the portal (you do not need to make a payment to visit the CWP). You will need your account number to sign into the portal.

ACH (BANK DRAFT) AUTO-PAYMENTS

Call the office or download the Authorization Form from our website if you would like to have your monthly payments taken directly from your checking or savings account. There are no fees for this service.

WATER TREATMENT PLANT GROUNDBREAKING

On August 16th, 2024, BDM Rural Water System, Inc., held a groundbreaking ceremony for its new Water Treatment Plant. In addition to BDM board members and staff, those in attendance included Jennifer Hieb from Senator Mike Rounds' office, Andrea Rose-Prehn from Representative Dusty Johnson's office, Lesleeann Palmer of NCOG, Jeremiah Corbin, Executive Director of the SD Association of Rural Water Systems, Brian Bergantine and Jerad Enger of AE2S Engineering, Jacob Swanberg of Swanberg Construction, Inc., BDM attorney Danny Smeins, and several past board members. Special guests were Dale Kurth and Don Erickson, members of the original Board of Directors. Guests were treated to cookies and lemonade following the ceremony.

BDM General Manager Rodney Kappes welcomed the guests to the new Water Treatment Plant groundbreaking ceremony.

Participating in the groundbreaking, left to right: Jacob Swanberg, Jennifer Hieb, Andrea Rose-Prehn, Lesleeann Palmer, Jerad Enger, Brian Bergantine, Torre Raap, Kevin Deutsch, Don Ogren, Rodney Kappes, Dale Kurth, Marc O'Brien, Alex Suther, and Jeremiah Corbin

OFFICIAL NOTICE OF ANNUAL MEETING

Monday, March 31, 2025

BDM Rural Water System, Inc. will hold its 45th annual meeting on Monday, March 31st, 2025 in the Britton Event Center at 1203 3rd Street in Britton. (Please note the location change!) The business meeting will be called to order at 6:00 pm.

The director position for District Three is up for election in 2025. Hal Treeby has served this position for four terms and is seeking re-election.

Marc O'Brien's director position in District Four is also up for election. He has served two terms and is seeking re-election.

The District Six director position is up for election as well. Alex Suther has served for two terms and is seeking re-election.

DIRECTOR DISTRICTS UP FOR ELECTION ARE AS FOLLOWS:

DISTRICT THREE: *Claremont East, Claremont West, Columbia, Shelby, Lansing, North Detroit, South Detroit, Portage, Hecla, Liberty, and Greenfield Townships in Brown County*

DISTRICT FOUR: *Dayton, Newark, Stena, Miller, Weston, and White Townships in Marshall County*

DISTRICT SIX: *LaBelle, Veblen, Dumarce, McKinley, Lake, Red Iron Lake, Eden, and Buffalo Townships in Marshall County; and Norway, Bossko, Long Hollow, and Dry Wood Lake Townships in Roberts County.*

DIRECTIONS TO THE EVENT CENTER: *From Hwy 10 (Vander Horck Street), go north on 12th or 13th Avenues for 5 blocks to 3rd Street. Additional parking is available across the street south of the Event Center.*

Please see the Notice below for the rules and requirements regarding the election of director positions. If you wish to seek election to a director position or nominate someone to that position, please call or visit the BDM office to request a nominating petition. Petitions must be filed by February 14th, 2025.

Financial and operations reports will be available. Door prize drawings will be held. Only BDM members are eligible to vote and enter the drawings. Supper will be served following the meeting. In case of inclement weather, the meeting will be held on Monday, April 7th at the Britton Event Center.

RULES GOVERNING ELECTION OF DIRECTORS

An amendment to Article VIII, Section 3 of the By-Laws of BDM Rural Water System, Inc. was adopted on December 28, 2020, and states:

“Each year prior to the annual meeting of members, anyone including incumbent directors seeking election shall file with the Secretary of the Corporation a nominating petition stating the District Director position which they are seeking, signed and dated by at least 15 members of the corporation. The members signing the petition do not have to reside in the district for which the director candidate resides or is seeking election. Petitions shall be filed at least 45 days before the scheduled annual nominating meeting. If only one nominating petition is filed for a director position they shall be considered elected and the election reported to the annual meeting or special meeting of members and as part of the Notice of Member Meeting. If more than one nomination petition is filed as required herein then an election will be held at the member meeting and names or lists of candidates included as part of the Notice of Meeting. No further nominations shall be made at the member meeting called for election of directors. If no nominating petitions are filed it shall be the duty and responsibility of the Board of Directors to appoint a director to serve the full term of such director position up for election.”

WATER MATTERS

AQUIFERS 102

For most South Dakotans, the water that comes out of your tap started out in the ground and has been drawn from things called aquifers. As such, the importance of aquifers to all of us cannot be exaggerated. In the last issue (October 2024), we learned what an aquifer is, how water gets into them and how it is drawn from them. Let's touch on a few more key points:

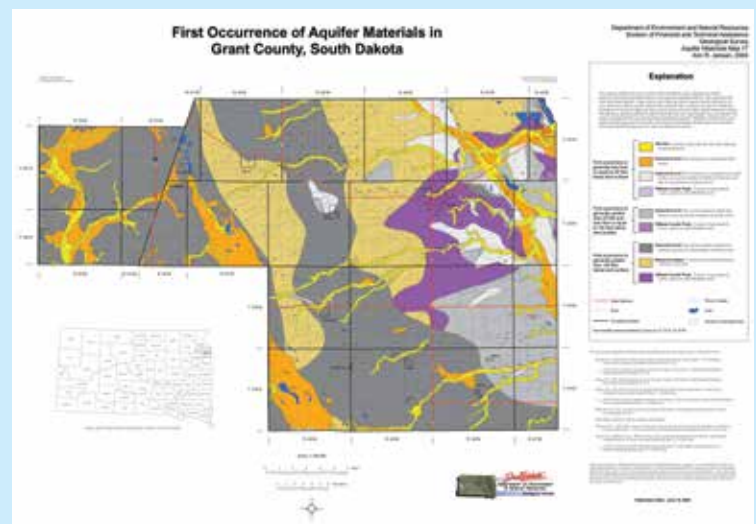

HOW DO WE FIND AQUIFERS?

Because aquifers (water bearing geologic materials) are underground, locating them in any detail often requires the drilling of exploratory (test) holes to see what is down below. Each new test hole in an area helps define where aquifers are, and how extensive they may be. In some cases, the aquifers are large and expansive, covering parts of many counties. In others, an aquifer found in one test hole may not appear in a hole drilled just a few tens or hundreds of feet away.

To learn more about an aquifer, wells are sometimes installed after a test hole is completed. These observation wells allow hydrologists and engineers to measure the amount and level of water in the well, and hence the aquifer. They can also be used to gather samples from the aquifer to assess its suitability for various uses, and monitor changes in quantity and quality over time.

WHERE ARE THE AQUIFERS IN SOUTH DAKOTA?

In South Dakota, the Geological Survey Program of the Department of Agriculture & Natural Resources has been working to define the State's ground water resources for many years. They have drilled roughly 23,800 test holes to help define the extent of our aquifers. Maps and publications have been prepared that can be used by anyone interested in learning more about these critical resources. To find these documents, visit their website, www.sdgs.usd.edu, to find information on aquifer resources in your area.
